Uniform Fine Assessment 2.4.2 Release

December 17, 2004

Introduction

The FMCSA Field Systems Team semiannual software release includes UFA 2.4.2.

The Uniform Fine Assessment (UFA) software consists of three computer models, one for FMCSR violations, one for HMR violations, and one for cases that include both types of violations. This multi-attribute utility model defines an organizational judgment profile to be used for assessing fines for violations of the Federal Motor Carrier Safety and Hazardous Materials Regulations. The model includes systematic consideration of the legislative criteria and is as objective as possible.

If you are upgrading to UFA 2.4.2, you must have UFA 2.4.0 or higher installed. Older versions of UFA must be uninstalled before this release of UFA is installed. As always, remember to back up your work.

To use CaseRite, UFA, and CAPRI together, you must install the CAPRI 6.2, CaseRite 3.3.4, and UFA 2.4.2 updates at the same time.

Enhancements and Bug Fixes

The following information outlines the enhancement and fix that have been made to UFA 2.4.2.

- UFA accesses an updated violations table.

Technical Support

This document may explain or identify many general questions or issues that you may have noticed with UFA 2.4.2. However, you may still have concerns or questions. For more information, contact the FMCSA Technical Support Team:
